NEWS RELEASE

ShearBan[®] Product Enhancement

Minneapolis, MN – Through continuous testing, we've discovered a formula for achieving significantly improved application and performance results with Tamarack's ShearBan[®] sheets. The latest ShearBan[®] revision offers an average 200% improvement in bond strength and conformability, which is especially beneficial when forming the low-friction material around challenging contours.

ShearBan[®] sheets apply directly to any orthosis, prosthesis or footwear, for immediate relief from painful rubbing, blisters, calluses and diabetic ulcers. ShearBan[®] doesn't alter the "fit" of a properly fabricated device, making it a viable solution for a spectrum of lower & upper limb friction issues.

As of January 2009, Tamarack had begun shipping new product inventory through its distribution chain. For more information, visit www.Shearban.com.

Tamarack Habilitation Technologies, Inc. is a product design & manufacturing company specializing in ankle-foot biomechanics and friction management technology. Manufacturer of the renowned Tamarack Flexure Joint[™], Tamarack has a short list of products distributed in the orthotic & prosthetic industry.
